

Dönges wildfire glove 'Wildland Fire'

Everything under control when things get hot.

Dönges wildfire gloves

Protection and functionality in use

Wildfire gloves are an important piece of equipment for emergency services during vegetation and forest fires. They protect the hands from extreme temperatures and flying sparks. They also offer protection against mechanical impacts such as thorns or sharp branches, which are common in the rough terrain of such operations. The gloves have the optimum grip required for handling various hand tools.

The development of these gloves aims to combine optimum protection with a high level of comfort and handling capability. The back of the hand is innovative EffiSHELL - a three-layer fabric that is characterised by reduced flammability and water resistance. It offers an exceptional combination of protection and flexibility, ensuring comfort even during prolonged use without restricting mobility.

Washable and thermostable goatskin leather is used for the palm, which impresses with its durability and grip while offering a comfortable feel. To maximise thermal protection, the back of the hand is equipped with an additional layer of insulation. In the palms, a combination of para-aramid, polyester and fibreglass provides reliable protection against mechanical risks such as thorns and sharp branches. Goatskin reinforcements on the fingertips and in the knuckle area provide additional stability and increase abrasion resistance.

Thanks to the careful selection of these robust and heat-resistant materials, the gloves not only offer reliable protection against flames and heat damage, but also a high level of breathability. This ensures that the hands remain dry and comfortable even during intensive use.

Special attention is paid to the sensitivity required for the safe operation of tools and precise work. Despite the comprehensive protective functions, the gloves ensure a high level of dexterity and optimum functionality. This makes them indispensable for emergency crews at vegetation fires and supports efficient and safe working in challenging environments.

Order-no. Size

202664 6 (XS)

202669 7 (S)

202670 8 (M)

202671 9 (L)

202665 10 (XL)

202666 11 (2XL)

202667 12 (3XL)

202668 13 (4XL)

Upper material:

Back of hand: Nomex®/viscose FR 35 % / 65 % with PU membrane and 100 % cotton lining.
Palm: Washable and thermally stable goatskin and fibreglass-reinforced inner lining against mechanical risks.

Reinforcements:

Goatskin reinforcements on the fingertips and knuckle area.

Cuff shape:

Elasticated cuff.

Other features:

Pull-on loop.

Tested according to EN 388:2016 / ISO 13997

Abrasion resistance: Level 3

Cut resistance: Level 4

(Further) tear resistance: Level 4

Puncture resistance: Level 3

Cut resistance according to ISO: Level C

and EN 407

Limited flame development: Level 4

Contact heat: Level X

Convective heat: Level 2

Radiant heat: Level 1

ISO 16073-4 'PPE for forest firefighting ... Part 4: Gloves' is currently pending.
